How to Connect to DeltaWiFi Before and During Your Flight?

Delta Wi-Fi

Introduction to DeltaWi-Fi

Staying connected while traveling has become an important part of the flying experience. Whether passengers want to check emails, browse websites, message friends, or complete work, in-flight internet makes air travel more convenient. Delta Air Lines offers onboard Wi-Fi services on many of its flights, allowing eligible passengers to access the internet while flying. Deltawifi helps travelers stay connected above the clouds through available onboard internet services. Depending on the aircraft and route, passengers may access complimentary Wi-Fi or other available internet options. Understanding how to connect before and during a flight can help passengers enjoy a smoother online experience.

What Is Delta Wi-Fi?

DeltaWiFi is Delta Air Lines' onboard internet service that allows passengers to connect their personal electronic devices to the internet during a flight.

Passengers can use supported smartphones, laptops, and tablets to access available Wi-Fi services. The connection process generally involves enabling Wi-Fi, selecting the onboard network, and opening the airline's Wi-Fi portal.

Depending on the aircraft, route, and service availability, passengers may be able to:

Internet speed and availability may vary throughout the journey.

Can You Connect to DeltaWiFi Before Your Flight?

Passengers can prepare their devices before boarding, but the onboard DeltaWiFi network generally becomes accessible after they are on an equipped aircraft and the service is activated.

Before departure, travelers should complete a few simple preparations:
Preparing in advance can reduce connection problems after boarding.

How to Connect to DeltaWiFi During Your Flight?

Connecting to DeltaWiFi is generally straightforward. Passengers can follow these steps once onboard Wi-Fi service is available.

- **Step 1: Enable Airplane Mode**
  After boarding, switch your smartphone or tablet to airplane mode as instructed by the airline.

- **Step 2: Turn On Wi-Fi**
  Open your device settings and activate the Wi-Fi option while keeping airplane mode enabled.

- **Step 3: Select the DeltaWiFi Network**
  Look for the onboard network name displayed in the aircraft or provided through the onboard instructions.

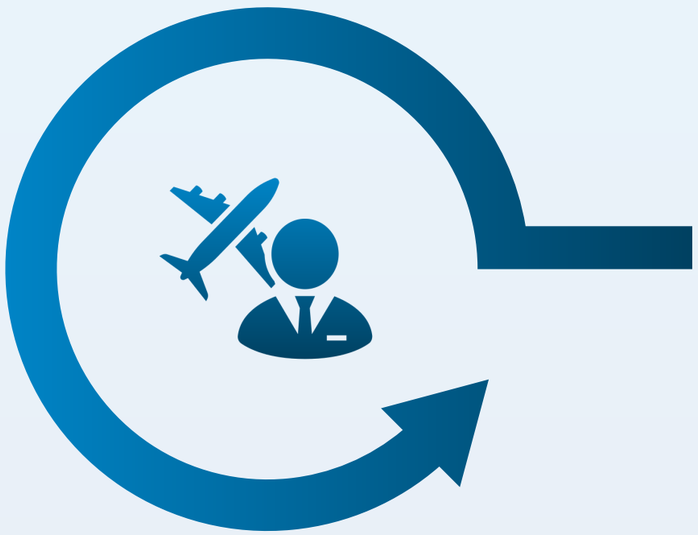

- **Step 4: Open Your Browser**
  Launch a web browser on your device. If the connection portal does not appear automatically, try visiting the Delta Wi-Fi portal address provided onboard.

- **Step 5: Follow the Instructions**
  Review the available internet options and complete the required login or access process.

- **Step 6: Start Browsing**
  Once connected successfully, you can use supported online services during your flight.
