

Outdoor Plumbing Sandy UT Bumble Bee Plumbing Hose Bibs Irrigation Sandy homeowners who rely on outdoor water access for gardening, vehicle washing, pet care, and lawn and landscape irrigation need outdoor plumbing that is installed correctly for Utah's climate, particularly the freeze risk that comes with the temperature swings between Sandy's warm summers and cold winters. Bumble Bee Plumbing installs and services outdoor plumbing throughout Sandy and the surrounding communities, with specific expertise in frost-free hose bib installation that is the appropriate standard for Utah's climate. Standard hose bibs that mount directly to the exterior wall and include no freeze protection fail in Sandy winters when temperatures drop below freezing while a hose remains connected. When a hose is left attached, the self-draining mechanism of a frost-free hose bib is prevented from working, allowing water to remain in the outdoor section of the pipe where it freezes, expands, and cracks the bib or the pipe behind the wall. Bumble Bee Plumbing installs frost-free hose bibs with the appropriate 8 to 12-inch pipe stem for Sandy's typical exterior wall and insulation configuration, ensuring that the valve mechanism is inside the heated envelope of the home where freeze risk is minimal. Irrigation system connections are another outdoor plumbing service that Bumble Bee Plumbing handles in Sandy. Connecting a new irrigation system to the home's water supply requires a proper isolation valve and backflow preventer, and Bumble Bee Plumbing installs these connections to Utah code with the backflow testing documentation that some Sandy municipalities require.

Bumble Bee Plumbing | 10178 Heytesbury Ln, Sandy, UT 84092 | [Plumber Sandy \(385\) 205-1833](tel:(385)205-1833)
