

Missouri vehicles registered in certain counties are subject to emissions testing as part of the registration renewal process. A Auto Express in Raytown helps drivers prepare for emissions inspections and addresses the repair needs of vehicles that have failed. Jackson County, where Raytown is located, is one of the Missouri counties that requires emissions testing for applicable vehicles. The test measures exhaust emissions and checks OBDII diagnostic systems for stored fault codes. A vehicle with check engine light illuminated typically fails the diagnostic portion of the emissions [website](#) test even if tailpipe emissions are within limits. Resolving a failed emissions [Auto Repair Raytown](#) test begins with accurate diagnosis of what caused the failure. If a check engine code triggered the failure, the root cause of that code must be identified and repaired. Clearing the code without repairing the underlying problem does not resolve the failure; the code will return.

Readiness monitors must be set before a vehicle can pass the OBDII portion of an emissions test. After clearing codes or disconnecting the battery, the vehicle must complete specific drive cycles to allow the engine management system to run its self-tests. A vehicle brought for emissions testing immediately after code clearing typically fails for incomplete readiness monitors. A Auto Express prepares vehicles for emissions testing by resolving the underlying issues causing codes, confirming repairs are effective, and advising on the drive cycle requirements to set readiness monitors before the test. For emissions-related repair and preparation in Raytown, call A Auto Express at +1 816-503-6153.
