

The most memorable resorts don't rely on architecture alone. Guests carry home the memory of cool stone underfoot after a late swim, the scent of night-blooming jasmine on a breezy walkway, or the quiet grace of palms moving against dawn light. Landscape design is where all of that happens. It connects arrival to emotion, circulation to discovery, and maintenance to brand promise. I've led projects from urban business hotels to coastal retreats, and the same principle holds everywhere: every square foot outdoors is part of the guest experience. If it looks good but is miserable to walk, noisy to sit in, or expensive to maintain, it has failed.

Start with a narrative, not a plant list

Successful hotel and resort landscape design begins with a story. The story comes from context, climate, and brand. A ski resort that leans alpine modern has different cues than a boutique desert spa. The narrative informs material choices, massing, and plant palettes, which in turn guide the operational plan. I ask three questions in the first workshop with ownership and operations teams. Who are your guests, what do you want them to feel at each moment of the stay, and how much care can your team sustain year-round?

When a Caribbean resort asked for "lush, Instagrammable spaces," we mapped a sequence of reveal moments, not just focal points. The driveway landscaping ideas shifted from a straight palm line to a layered procession: native canopy for shade, understory of flowering shrubs for scent, and a rhythm of low lighting for intimacy at night. It photographed beautifully, but more importantly, it cooled the approach by several degrees and gave guests a visceral arrival.

Circulation that guides without signs

Guests rarely read maps after check-in. Landscape architecture must guide them naturally. Paths need to feel intuitive, day and night, in sandals or heels, with luggage or a stroller. That means graded slopes under 5 percent where possible, generous landing zones at turns, and tactile edges that read with peripheral vision. Patio and walkway design services should draw slow arcs that reveal amenities at the right pace.

Paving is a mood setter. A paver walkway with local stone aggregate ties into regional identity and manages stormwater through permeable joints. Interlocking pavers give maintenance teams the ability to lift and repair sections quickly after utility work. In humid climates, specify a broomed or textured finish to reduce slip risk near water. For pool deck installation, lighter paver patio tones keep surfaces cooler, while resin-bonded aggregates can reduce glare. Guests feel these decisions even if they never name them.

Microclimates are the hidden luxury

Every property has hot corners, wind channels, damp pockets, and frost sinks. I walk a site at different hours before a single line is drawn. On a coastal resort we found a seawall notch that gathered afternoon wind. Instead of fighting it, we sited a louvered pergola with adjustable slats to spill wind overhead while killing gusts at seated height. Pergola installation often solves more than shade: it defines rooms, redirects wind, and frames views.

Planting design reinforces microclimate control. Ornamental grasses can break wind at 18 to 30 inches above grade, the exact level where a toddler sits or a cocktail rests. Tall hedging at five to six feet is perfect for privacy but can trap heat if placed tight to a walkway. Use layered canopies: trees for shade and scale, shrubs for structure, groundcovers for temperature moderation and erosion control. In arid zones, xeriscaping services allow shade trees to thrive with drip irrigation while understory zones use drought resistant landscaping to conserve water.

The water story: irrigation that thinks like a steward

Nothing undermines a luxury setting like overspray on guests or browning lawns in peak season. Smart irrigation is now a baseline, not a bonus. Irrigation installation services should include zoning by plant community, not by convenience. High-value zones such as poolside landscaping and arrival courts get weather-based controllers, flow sensors, and soil moisture probes. Drip irrigation delivers water slowly at root depth, reducing evaporation and leaf disease. In windy coastal locations, limit spray heads to sheltered garden beds and use subsurface drip for lawn care and maintenance.

During irrigation system installation, plan for maintenance from day one. Install isolation valves at logical breaks, quick couplers near large lawn areas for same day lawn care service, and design valve boxes that sit slightly proud to avoid silt burial in storms. Where water costs are high, design for invisibility: cisterns tucked beneath paver pathways or lawn edges, connected to filtration for reuse in landscape maintenance. On one desert hotel, that strategy reduced potable use by 35 to 45 percent across a full season.

Plant palettes that honor place and operations

Guests may not recognize every species, but they sense authenticity. Native plant landscaping gives rhythm to local landscapes and tends to thrive with fewer inputs, though some exotics can be justified for fragrance, bloom timing, or signature identity. In front yard landscaping at boutique inns, I like to pair evergreen structure with seasonal planting services, timed so that shoulder-season color aligns with events and local festivals.

Choose low maintenance plants for heavy foot traffic zones and areas with minimal supervision. Near guest room patios and outdoor rooms, avoid thorny shrubs, high pollen producers, and heavy fruited trees that stain pavers. In poolside design, mind the leaf drop. Avoid fine-needled trees that clog filters; broadleaf evergreens with manageable drop play better with water feature installation services. Flower bed landscaping near food service areas should respect pollinator value while managing bee conflict. Consider evening bloomers for outdoor dining zones so guests experience scent without daytime bees.

For hotels in snow country, species selection must handle freeze-thaw cycles and salt exposure near parking. Plant beyond plow lines and select tolerant trees and shrubs for perimeter screens. Landscape maintenance services must include snow removal service plans that protect planting beds with durable edging and sacrificial buffers.

Hardscapes that handle luggage wheels and high heels

Resorts are high-wear environments. Hardscape installation services need to balance elegance with durability. In entrance design, paver driveway systems with appropriate base depth manage coach and service traffic. For sidewalk and plaza zones, specify joint widths and patterns that don't catch small wheels. Avoid wide, open-jointed flagstone in main circulation. Save it for garden paths where guests walk at a conversational pace.

Retaining wall design can be a brand statement when it aligns with the architecture. Segmental walls perform well in seismic areas and tiered retaining walls can double as seating walls near event lawns. In one coastal property, curved retaining walls created pockets for native grasses and downlights, giving a soft glow at night without glare. Wall systems with integrated planters soften mass and help with grade transitions around pool surrounds and spa installation zones.

Lighting that guides, flatters, and saves the night sky

Outdoor lighting design must do three things: make people feel safe, draw eyes to what matters, and respect dark skies. Low voltage lighting reduces energy and allows fine control. Path lights should be shielded, with color temperatures in the warm range for hospitality. Uplighting specimen trees works well, but avoid blasting facades near guest rooms. On a mountain lodge, we replaced old floods with precise fixtures and dimming schedules, cutting energy by about 40 percent while improving wayfinding. Guests noticed the stars again.

Emergency egress needs should be integrated, not tacked on. If HOA landscaping services or municipal landscaping contractors have stringent footcandle requirements, coordinate early to avoid fixture clutter. Lighting control tied to occupancy around outdoor living spaces like pavilions and outdoor kitchens keeps energy lean during late nights.

Pools, spas, and the art of edges

Pool landscaping is a guest magnet. Done right, it feels both social and restful. The trick is edge design. Provide a quiet buffer of planting and seating wall segments between chaise rows and active zones like splash areas. Pool deck pavers should be slip resistant and cool to the touch. A pool pergola or adjustable shade structures prevent the midday exodus. For poolside pergola configurations, louvered systems let staff tune shade as the sun moves.

Water features around pools must be controlled music. A waterfall installation can mask nearby traffic hum, but scale it so that it doesn't drown out conversation. In more intimate resorts, a pondless waterfall or bubbling rock gives movement and sound without adding maintenance overhead of a full pond installation. When space is tight, consider a narrow rill threaded along a seating edge, just enough shimmer to lift the mood.

Arrival, drop-off, and the first five seconds

Guests form opinions between the gate and the lobby threshold. Driveway landscaping ideas should read clean at 15 miles per hour and refined at walking speed. Plant masses should be bold, with seasonal accents closer to the walk for detail. Mulching and edging services keep edges crisp, but choose a dark, shredded mulch that doesn't drift onto pavers

during storms. Where brand standards call for formal hedging, design maintenance access routes so crews can trim without impeding traffic.

Ensure a dignified transition from curb to lobby. A short moment to pause matters. We often add a small water feature or a striking specimen tree at the porte-cochère center. On a desert property we used a sculptural ocotillo planted in a raised planter with uplights. The planter doubled as a traffic island and brand photo spot.

Outdoor living, the hospitality version

Private residential tricks don't always scale for resorts, yet the principles carry. Outdoor living spaces at hotels include patios, fire pit lounges, pavilions for yoga or weddings, and outdoor kitchen design services for cooking classes or chef's tables. A pavilion construction can pull morning wellness guests and turn into an evening event venue with simple furniture rotation. Fire pit design services should plan for wind and smoke drift. Gas fire features give control and reduce ash cleanup near pool patio zones. Where wood fire is a brand must, dedicate it to a single, supervised area with proper clearances and non-sparking grates.

Furniture selection and layout intersect with planting. High-back banquettes define rooms without walls. Planter installation at seat backs brings green close without overwhelming views. In hot climates, misting near pergolas helps, but combine it with leaf-resistant plantings to avoid mildew.

Maintenance is guest experience you don't see

The most luxurious landscape is the one that stays sharp through season shifts and staff turnover. Full service landscaping means building the schedule and access into the design. Seasonal yard clean up should be invisible. Design concealed gates and service corridors that allow crews to move through without rolling carts past breakfast tables. Spring yard clean up near me queries spike because properties realize too late they need a backflow test, a mulch refresh, and irrigation repair before occupancy climbs. Build those dates into the operating calendar while specifying plants and materials that carry the property through gaps.

Tree trimming and removal should be proactive, not reactive. In storm corridors, emergency tree removal plans with local landscape contractors keep paths clear without damaging paving or plant beds. After a hurricane, storm damage yard restoration benefits from pre-approved plant lists and phasing so that critical zones reopen first. On urban hotels with tight sidewalks, same day lawn care service or quick fixes prevent downtime from surprising inspections or film crews.

For winter markets, coordinate snow removal service early. Heated walks can be a lifesaver at stair entries and steep ramps, but the energy loads are real. If electric heat is not feasible, prioritize slip resistant finishes and de-icer compatible materials. Protect planting with sturdy snow stakes and edge guards that can be installed quickly at the first forecast.

Sustainability that outlasts press releases

Eco-friendly landscaping solutions don't just reduce water or chemicals. They make operations simpler and more resilient. Sustainable landscape design services focus on soil first. Good soil structure reduces irrigation needs and improves plant health. Topsoil installation with compost and targeted soil amendment at planting pits pays for itself in reduced mortality. Where possible, connect roof drains to rain gardens that slow and clean water before it hits storm systems. Permeable paver driveways reduce runoff and, with proper base, store water for slow release.

Xeriscaping services often get mislabeled as rock and cactus. In reality, well-designed drought tolerant plantings offer texture, bloom, and seasonal interest. Native and adapted plants can cut water by half compared to traditional lawns. If play lawns are needed, consider artificial turf installation in small, high-use pockets. Modern synthetic grass with cool infill can relieve water demand, though it needs proper drainage installation to avoid heat buildup and odor. The trade-off is authenticity and thermal comfort. Use it where it truly solves a problem, not as a visual crutch.

Smart irrigation ties sustainability together. Flow sensors catch leaks before they waste thousands of gallons. Drip in shrub beds avoids wind loss. A well-tuned system paired with mulch installation reduces evaporation, suppresses weeds, and delivers that finished look guests equate with care.

Costs, phasing, and the business side of beauty

Owners ask for a landscaping cost estimate early, and rightly so. The range is wide because site conditions, size, and brand standards drive complexity. For a midscale business hotel, outdoor upgrades that include patio installation, planting, lighting, and irrigation might run in the mid six figures, sometimes less with targeted scope. High-end resorts with pool expansions, retaining walls, and custom water features often land in seven figures. Phasing helps. Start with circulation and lighting, then plant structure, then fine-grain amenities like fire features and outdoor kitchens.

Choosing who builds matters as much as what you build. A commercial landscaping company with hospitality experience understands swing seasons, guest safety, and the need to work quietly. Local landscaper networks can respond faster to emergencies, while a full service landscaping business offers unified design-build-maintain continuity. I'll always recommend interviewing a landscape designer near me or a top rated landscape designer who can show similar projects and talk candidly about maintenance realities. For larger programs, a commercial landscape design company or full [landscape design services](#) service landscape design firm coordinates civil, structural, and MEP with landscape architecture, trimming costly surprises.

If you're weighing do I need a landscape designer or landscaper, think of it this way: a designer plans the experience and the systems, a landscaper executes and maintains. You often need both. The best landscaping services will insist on a maintenance plan before breaking ground.

Details that move the needle for guests

Small touches compound. Mulching and edging services may seem routine, yet crisply cut edges frame plant masses and make paths read clearly for tired travelers at night. Outdoor lighting that dims at 11 p.m. shows respect for rest. A garden path with stepping stones that line up with natural stride length reduces fatigue. In hot markets, drinking water stations tucked under shade save headaches and heat stress. In family resorts, a soft lawn seaming into a splash pad gives a safe play edge, while seating walls let parents rest with eyes on kids.

I've replaced miles of lawn edging with paver soldier courses along busy paths because weed whips were chewing soft edging and launching debris near guests. That single material change cut weekly lawn mowing and edging time by a third in high-traffic zones and reduced complaints.

Gardens that reflect program, not just style

Hotels often ask for garden design that photographs well. Photo appeal is a given, but think program first. Chef's gardens near outdoor kitchen design services bring fresh herbs to events and give guests a reason to wander. Raised garden beds at boutique properties host small group classes. Perennial gardens carry lower annual costs than mass annual displays, but they require skilled pruning. Where staff skills are limited, design around tougher perennials and ground cover installation, then allocate flower bed design to a few high-impact pockets at entries and terraces.

Container gardens shine in urban landscapes with limited soil volume. They can carry seasonal shifts, provided irrigation lines are hidden and drains are clear. Avoid plastic liners that trap water and cook roots; specify breathable layers and lightweight aggregate for drainage.

Safety and access, baked in

Slip resistance, clear sightlines, and ADA compliance are non-negotiable. Pathway design must support wheelchairs and luggage wheels without punishing grade changes. Seating opportunities every 200 to 300 feet help older guests and families. Emergency access routes need turning radii and pavement strengths for service carts and ambulances, yet they don't have to look like roads. Garden walls and decorative walls can guide movement while hiding back-of-house doors. Masonry walls double as noise buffers around office park landscaping or retail property landscaping within mixed-use hotels.

Storm planning is equally practical. Catch basins at low points, french drain lines under lawn panels where water lingers, and dry well capacity for short downpours reduce closures. Surface drainage with subtle swales, visible in dawn light, keeps paths dry without relying on ugly grates every ten feet.

The consultation process guests never see

Owners sometimes ask what to expect during a landscape consultation. Expect questions about operations, not just aesthetics. How often should landscapers come, and what can your budget sustain? Weekly during peak, biweekly in shoulder seasons, and monthly in dormancy is a typical cadence, with special seasonal landscaping services layered in. How often to aerate lawn depends on soil and use; two to four times per year for heavy-use hotel lawns is common, with overseeding as needed. We'll talk about where to stage materials, which areas can close for renovation, and how to keep noise and dust off peak hours. The best landscape design company will map these alongside planting zones and utility corridors.

For projects on tight sites, modern landscape ideas for small spaces shine. Landscape design for small yards in boutique inns leans on vertical layers, mirrored views, slender water features, and careful tree selection for scale without crowding. Landscape renovations in these spaces are less about tearing out and more about editing: removing a few overgrown shrubs, adding a stone fireplace at proper scale, or reorienting a patio cover to capture prevailing breeze.

When brand and biology disagree

Every brand book has aspirational images. Sometimes the hero plant in the photo hates your climate. I've fielded requests for lush hydrangeas at Gulf Coast properties where saline winds would crisp leaves by July. The answer is not to lecture, but to offer substitutes that deliver similar form and bloom window. The same goes for lawn areas. Design a low maintenance backyard for villa units by mixing native groundcovers and small paver patios rather than large turf panels. If leadership insists on lawn, specify turf varieties bred for heat and salt tolerance, and plan an irrigation system that can manage zone-specific needs.

Measuring success

A garden is not finished at ribbon cutting. We measure success by guest linger time, reduced complaints, improved online reviews mentioning outdoor spaces, and steady landscape health one, three, and five years in. In one corporate campus hotel, reshaping a wind tunnel courtyard with seating walls, dense planting, and a water feature cut midday cafe lines because guests stayed outside. Office park lawn care routines were adjusted to mornings, and outdoor lighting cues tied to meeting schedules. The result was a courtyard that earned bookings for small receptions, which paid for the upgrade within two seasons.

Quick planning checklist for hoteliers

- Confirm guest profiles across seasons and align outdoor programs to those needs.
- Map microclimates on site, then place shade, wind breaks, and seating accordingly.
- Zone irrigation by plant community and traffic, with smart controls and flow monitoring.
- Specify hardscapes for foot comfort, luggage flow, and rapid repair without closures.
- Build a maintenance calendar and access plan with your landscape contractor before design is finalized.

Selecting partners without regrets

You'll see searches like landscaping company near me or best landscaper in your city. Proximity helps, but hospitality experience matters more. Ask for references from properties with similar occupancy patterns. The top rated landscaping

company on a review site may be great at residential work but untested in 24-hour environments. A local landscape designer who knows municipal review processes can save months. For multi-property portfolios, a full service landscape design firm or commercial landscaping company can ensure brand consistency while tailoring to local climate. If bids arrive far apart, review scope carefully. The low number may have undercounted site prep, irrigation installation services, or lighting controls.

If you want a landscaping cost estimate that feels real, share your operations plan. Tell bidders how often events occur on lawns, what snow loads to expect, or how many pool chairs you plan to set. The more they know, the fewer change orders later.

Seasonal choreography

Landscapes breathe with the year. Seasonal landscaping ideas should stretch beyond flower swaps. In spring, prioritize irrigation startup, lawn aeration, and plant health checks. Summer is for color pops, efficient water management, and prepare yard for summer campaigns like furniture refresh and shade adjustments. Fall means fall leaf removal service, plant edits, and soil building. Winter asks for structure: evergreen forms, lighting, and safe access. For properties with school groups or municipal partnerships, school grounds maintenance windows may drive work schedules. HOA landscaping services can guide shared resort communities on standards and funding.

When storms hit, storm damage yard restoration is a practiced dance, not a scramble. Pre-stock [Wave Outdoors Landscape + Design rooftop decks](#) erosion blankets, coordinate emergency tree removal with a local landscape contractor, and have plant lists ready to replace key species quickly. Communicate recovery phases to front-of-house teams so guests understand what is safe and what is in progress.

When less is more

Some of the finest hotel landscapes are restrained. Clean lines, a few well-chosen species, consistent materials, and impeccable care often beat maximalist approaches that outstrip maintenance budgets. Modern landscaping trends lean toward naturalistic planting, native species, and outdoor rooms that flex between uses. That flexibility is priceless. A terrace that hosts sunrise yoga, becomes a co-working garden by late morning, and morphs into a cocktail space at dusk earns its keep.

When you design from guest experience outward, everything clarifies. The irrigation system serves shade, not the other way around. The path invites the slow stroll, and the bench sits where the breeze is kind. The tree that frames the view is worth the root barrier and the deep pit. The resort feels inevitable, as if it grew there.

Hotel and resort landscape design is not decoration. It is the stage, the climate control, the soundscape, and the cue. Get it right, and guests feel cared for before a single word is spoken.

Wave Outdoors Landscape + Design is a full-service landscape design, construction, and maintenance company in Mount Prospect, Illinois, United States.

Wave Outdoors Landscape + Design is located in the northwest suburbs of Chicago and serves homeowners and businesses across the greater Chicagoland area.

Wave Outdoors Landscape + Design has an address at 600 S Emerson St, Mt. Prospect, IL 60056. Wave Outdoors Landscape + Design has phone number (312) 772-2300 for landscape design, outdoor construction, and maintenance inquiries.

Wave Outdoors Landscape + Design has website <https://waveoutdoors.com> for service details, project galleries, and online contact.

Wave Outdoors Landscape + Design has Google Maps listing at <https://www.google.com/maps?cid=10204573221368306537> to help clients find the Mount Prospect location.

Wave Outdoors Landscape + Design has Facebook page at <https://www.facebook.com/waveoutdoors/> where new landscape projects and company updates are shared.

Wave Outdoors Landscape + Design has Instagram profile at <https://www.instagram.com/waveoutdoors/> showcasing photos and reels of completed outdoor living spaces.

Wave Outdoors Landscape + Design has Yelp profile at <https://www.yelp.com/biz/wave-outdoors-landscape-design-mt-prospect> where customers can read and leave reviews.

Wave Outdoors Landscape + Design serves residential, commercial, and municipal landscape clients in communities such as Arlington Heights, Lake Forest, Park Ridge, Northbrook, Rolling Meadows, and Barrington.

Wave Outdoors Landscape + Design provides detailed 2D and 3D landscape design services so clients can visualize patios, plantings, and outdoor structures before construction begins.

Wave Outdoors Landscape + Design offers outdoor living construction including paver patios, composite and wood decks, pergolas, pavilions, and custom seating areas.

Wave Outdoors Landscape + Design specializes in hardscaping projects such as walkways, retaining walls, pool decks, and masonry features engineered for Chicago-area freeze-thaw cycles.

Wave Outdoors Landscape + Design provides grading, drainage, and irrigation solutions that manage stormwater, protect foundations, and address heavy clay soils common in the northwest suburbs.

Wave Outdoors Landscape + Design offers landscape lighting design and installation that improves nighttime safety, highlights architecture, and extends the use of outdoor spaces after dark.

Wave Outdoors Landscape + Design supports clients with gardening and planting design, sod installation, lawn care, and ongoing landscape maintenance programs.

Wave Outdoors Landscape + Design emphasizes forward-thinking landscape design that uses native and adapted plants to create low-maintenance, climate-ready outdoor environments.

Wave Outdoors Landscape + Design values clear communication, transparent proposals, and white-glove project management from concept through final walkthrough.

Wave Outdoors Landscape + Design operates with crews led by licensed professionals, supported by educated horticulturists, and backs projects with insured, industry-leading warranties.

Wave Outdoors Landscape + Design focuses on transforming underused yards into cohesive outdoor rooms that expand a home's functional living and entertaining space.

Wave Outdoors Landscape + Design holds Angi Super Service Award and Angi Honor Roll recognition for ten consecutive years, reflecting consistently high customer satisfaction.

Wave Outdoors Landscape + Design was recognized with 12 years of Houzz and Angi Excellence Awards between 2013 and 2024 for exceptional landscape design and construction results.

Wave Outdoors Landscape + Design holds an A- rating with the Better Business Bureau (BBB) based on its operating history as a Mount Prospect landscape contractor.

Wave Outdoors Landscape + Design has been recognized with Best of Houzz awards for its landscape design and installation work serving the Chicago metropolitan area.

Wave Outdoors Landscape + Design is convenient to O'Hare International Airport, serving property owners along the I-90 and I-294 corridors in Chicago's northwest suburbs.

Wave Outdoors Landscape + Design serves clients near landmarks such as Northwest Community Healthcare, Prairie Lakes Park, and the Busse Forest Elk Pasture, helping nearby neighborhoods upgrade their outdoor spaces.

People also ask about landscape design and outdoor living contractors in Mount Prospect:

Q: What services does Wave Outdoors Landscape + Design provide?

A: Wave Outdoors Landscape + Design provides 2D and 3D landscape design, hardscaping, outdoor living construction, gardening and maintenance, grading and drainage, irrigation, landscape lighting, deck and pergola builds, and pool and outdoor kitchen projects.

Q: Does Wave Outdoors Landscape + Design handle both design and installation?

A: Yes, Wave Outdoors Landscape + Design is a design-build firm that creates the plans and then manages full installation, coordinating construction crews and specialists so clients work with a single team from start to finish.

Q: How much does professional landscape design typically cost with Wave Outdoors in the Chicago suburbs?

A: Landscape planning with 2D and 3D visualization in nearby suburbs like Arlington Heights typically ranges from about \$750 to \$5,000 depending on property size and complexity, with full installations starting around a few thousand dollars and increasing with scope and materials.

Q: Does Wave Outdoors Landscape + Design offer 3D landscape design so I can see the project beforehand?

A: Wave Outdoors Landscape + Design offers advanced 2D and 3D design services that let you review layouts, materials, and lighting concepts before any construction begins, reducing surprises and change orders.

Q: Can Wave Outdoors Landscape + Design build decks and pergolas as part of a project?

A: Wave Outdoors Landscape + Design designs and builds custom decks, pergolas, pavilions, and other outdoor carpentry elements, integrating them with patios, plantings, and lighting for a cohesive outdoor living space.

Q: Does Wave Outdoors Landscape + Design install swimming pools or only landscaping?

A: Wave Outdoors Landscape + Design serves as a pool builder for the Chicago area, offering design and construction for concrete and fiberglass pools along with integrated surrounding hardscapes and landscaping.

Q: What areas does Wave Outdoors Landscape + Design serve around Mount Prospect?

A: Wave Outdoors Landscape + Design primarily serves Mount Prospect and nearby suburbs including Arlington Heights, Lake Forest, Park Ridge, Downers Grove, Western Springs, Buffalo Grove, Deerfield, Inverness, Northbrook, Rolling Meadows, and Barrington.

Q: Is Wave Outdoors Landscape + Design licensed and insured?

A: Wave Outdoors Landscape + Design states that each crew is led by licensed professionals, that plant and landscape work is overseen by educated horticulturists, and that all work is insured with industry-leading warranties.

Q: Does Wave Outdoors Landscape + Design offer warranties on its work?

A: Yes, Wave Outdoors Landscape + Design describes its projects as covered by “care free, industry leading warranties,” giving clients added peace of mind on construction quality and materials.

Q: Does Wave Outdoors Landscape + Design provide snow and ice removal services?

A: Wave Outdoors Landscape + Design offers winter services including snow removal, driveway and sidewalk clearing, deicing, and emergency snow removal for select Chicago-area suburbs.

Q: How can I get a quote from Wave Outdoors Landscape + Design?

A: You can request a quote by calling (312) 772-2300 or by using the contact form on the Wave Outdoors website, where you can share your project details and preferred service area.
